

TEXAS TOUGH

DURABLE, FUNCTIONAL, SECURE AND COMPLETELY CUSTOMIZABLE

Texas Tough is a premier series of showcase equipment racks offering stylish design and visual appeal in multiple heights, from 20RU to 45RU, and 25" and 30" depths. Texas Tough racks are the first racks to incorporate built-in device fault notification. Available with customizable crowns for branding, support contact or other quick reference information.

FEATURES

Multi-Function Crown

Edge Lit Acrylic Badge - A laser engraved acrylic badge mounted in the center of the crown is edge lit by multiple RGB LEDs. Through our exclusive DesignLab™ process, each badge can be custom engraved with the customer's logo and contact information.

Equipment Fault Indicator - A PCB in the crown includes a contact closure that can be connected to a remote fault indicator. The indicator allows the LEDs to change color and can even trigger an audible alarm when an equipment fault is detected.

LED Down Lighting - LED lighting is activated when the door is open, to help illuminate the rack's interior.

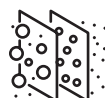

DINlok™ System with Precision Slide

The front and rear rails install to the DIN rails via the patented DINlok™ system. The installation is toolless and locks the rail into a specific location within provided 1" increments.

Made in the USA

Texas Tough racks are engineered and manufactured in our Ennis, Texas, facility qualifying them for BAA and TAA projects. All models are also safety listed to UL 2416.

Dust Prevention Snap-In Filter Cubes

Replaceable air filter panels, accessible from the outside of the rack, reduce dirt and dust intrusion.
